

Global Startup Ecosystem Analysis

Technical Documentation

1. PROJECT OVERVIEW

This project provides a comprehensive data-driven evaluation of the global startup ecosystem. By analyzing funding trends, geographic distributions, and sector-specific performance, this case study uncovers actionable insights for investors and stakeholders.

2. BUSINESS PROBLEM

Venture capital firms and startup founders need a data-driven evaluation of the global startup ecosystem to identify high-performing geographic markets, thriving industry sectors, and key investment drivers. This analysis addresses the lack of visibility into capital concentration and regional performance disparities.

3. DATA SOURCE & LICENSE

- Data Source: The raw dataset used for this project was taken from Kaggle.
- Data Reliability: The dataset fulfills the ROCC framework criteria (Reliable, Original, Comprehensive, Current, and Cited).
- License: Released under the CC0: Public Domain license, permitting free use, modification, and distribution for research and portfolio development.

4. METHODOLOGY

- Data Preparation: Cleaned and processed multi-table relational datasets (startups.csv, funding_rounds.csv, investors.csv, quarterly_summary.csv).
- Data Analysis: Performed complex SQL joins, aggregations (COUNT, MAX), grouping, and sorting using PostgreSQL and DBeaver.
- Data Visualization: Developed interactive Tableau dashboards to map regional performance, sector diversity, and capital inflow.

5. REPOSITORY STRUCTURE

- README.md -> Project documentation (this file)
- /sql/ -> SQL scripts used for querying and aggregating the dataset in DBeaver/PostgreSQL
- /data/ -> Source or summary CSV datasets (startups.csv, funding_rounds.csv, etc.)
- /images/ -> Tableau dashboard screenshots referenced in the README (Picture1.png, Picture2.png, Picture3.png)

6. KEY FINDINGS

- **Regional Dominance:** The United States leads globally in capital accumulation, investor engagement, and sector diversity.
- **Performance Extremes:** Significant disparities exist between top-tier hubs (US) and emerging markets (Bangladesh), indicating the need for localized research.
- **Top Performers:** Identified high-valuation outliers like CruxWare (peaking at \$2,405.16 million USD post-money valuation), setting benchmarks for market capitalization.

7. TOOLS & TECHNOLOGIES

- **SQL (PostgreSQL / DBeaver):** Data querying, relational table joins, and aggregation.
- **Tableau:** Visual storytelling, interactive filtering, and dashboard design.
- **Excel:** Initial data exploration and cleaning workflows.

8. HOW TO USE THIS REPOSITORY

1. Clone or download the repository.
2. Review the SQL scripts in `/sql/` to understand the query logic.
3. Open the CSV files in `/data/` to inspect the underlying dataset.
4. View the Tableau dashboard screenshots in `/images/` for the visualized results.

9. LICENSE

This project is open-source and available under the CC0 1.0 Universal (Public Domain Dedication) license. You are free to copy, modify, and distribute this work without restriction.
